---	----------------------	----------------------------

- 1) Shalini is the manager of one of the grocery shops of the chain “Ellelunga” and she wants to check on peak times how many people are entering inside the shop

- She opens the application on her device
- She presses on the button log in as manager
- She logs in with her credentials
- On the home page she sees the button “Statistics and Diagnostics” and presses it
- In front of her there are number of effective and expected entrances for the current week

More? Less?

- 1) Alberto B. hates technology, so he gambles his luck and tries to enter inside the market, unfortunately there are no available places to enter so he takes a ticket from the dispenser.
  - He gets to the ticket dispenser in front of the shop and presses the button to get a ticket
  - Reading the ticket, he sees the time slot in which he can enter the market
  - Since the time slot assigned is 2 hours later, he decides to do other things he had to do instead of queuing in front of the shop
  - When the time is getting close to the appointment time, he gets back to the shop
  - He retrieves the ticket from his pocket and scans it in the apposite machine, that lets him enter the market
  - After he finishes buying the groceries and paying for it, he shows the ticket to the cashier
  - Now he can exit the market
  
- 4) Francesco wants to make a delicious dinner with pasta and tuna. Unfortunately, just before dinner, circa at 19:00, he discovers that he is run out of pasta. Since he cannot wait the day after, he decides to book a visit for the current day:
  - He opens the app on his device and clicks on the button to *"Book a visit"*
  - He selects the time slot "20:00"
  - Between the received available stores from the application, he is unable to make a choice because there is not a store he likes
  - After 30 seconds of inactivity, the applications notifies Francesco that there are further available stores
  - Francesco clicks on the notification, hopeful to find his preferred store
  - After received the further stores, Francesco selects immediately "SicilianPasta" store
  - The system asks Francesco an estimate of how much time his visit will last and a list of items (or categories of items) he intends to buy. Since he is eager to eat pasta and tuna, he inserts just "pasta" as product he intends to buy and "15 minutes" as estimation time. Finally, he clicks on the *"Confirm"* button
  - The system sends a notification to remind him the visit, so Francesco gets ready to go
  - He arrives in the market in the assigned time and opens his app again
  - He clicks on the "Show ticket" and scans it in the apposite machine
  - After he takes 10 packs of pasta and pays for them, he opens the app and shows the ticket to the cashier
  - He proceeds to exit the market and run at home to cook his loved pasta and tuna.

It is Monday, Francesco M. is taking a break from his intense day at work. While he is eating a sandwich, he receives a notification from the application, being informed that his preferred store “The Good Goods” has an available time slot at 18:00 the following day. Since he usually does the shopping at 18:00 on Tuesday, he decides to book a visit. After he completes the procedure to book a visit and receives the virtual ticket, he continues to eat his sandwich before to come back at work.

More? Less?

Rientro: Sinistro: 1.43 cm, Nessun elenco puntato o numerato

- 1) Shalini Etion, who is the manager of one of the grocery shops of the chain “Carre-4”, wants to register a further store in CLup. In particular:
  - He opens the application on his device
  - He presses on the button “*Log in as manager*”
  - He logs in with the credentials of his authorized account
  - On the home page he presses the button “Register Store” and presses it
  - The system provides him a form where he can insert all the mandatory information
  - Etion inserts:
    - “Carre-4” as name
    - “Via Pino Daniele, 35 (Milan)” as location
    - “630 m<sup>2</sup>” as dimension
    - Which categories of goods are available into the store
  - Etion receives the notification confirming the successful registration of the store and goes to take a coffee. She is the manager of one of the grocery shops of the chain “Ellelunga” and she wants to check on peak times how many people are entering inside the shop
  
- 8) At the moment Cristian, who is the manager of the grocery shop “Love&Food”, is a worker controlling how many people are inside the store. After he notices that some bottles of wine were broken and consequently the wine department will be unavailable for 30 minutes, he decides to regulate the influx of people to guarantee the social distancing inside the store.
  - She/He opens the application on her/his device
  - She/He presses on the button “*Log in as manager*”
  - She/He logs in with her/his credentials of his authorized account
  - On the home page she/he presses the button “Statistics and Diagnostics Regulate Influx” and presses it

- He selects the store “Love&Food” where he is at the moment
- In front of her there are number of effective and expected entrances for the current week Cristian decreases the parameter regulating the influx of people in order to temporarily permit a number of entrances less than usual
- After he has received confirmation of the successful change of the parameter, he goes to the wine department to check how much the cost damage is and at which point is the cleaning of the department.

More? Less?

<b>Pagina 10: ha inserito</b>	<b>Giorgio Romeo</b>	<b>20/12/2020 11:26:00</b>
-------------------------------	----------------------	----------------------------

- Cristian decreases the parameter regulating the influx of people in order to temporarily permit a number of entrances less than usual
- After he has received confirmation of the successful change of the parameter, he goes to the wine department to check how much the cost damage is and at which point is the cleaning of the department.

Se la media e' di 43 minuti e uno esce dal negozio dopo 44 minuti, il sistema non lo ammetterebbe in uscita. In questo modo anche se uno ci mette  $AVERAGE(trips)+3*VARIATION(trips)$  allora per il 99% dei casi non avresti problemi
