A.1)

SHOP SELECTION

HOME PAGE OF THE APP

- I. Mobile App, this must be easy to use, as it will have to be used from people of all ages, this means that the interface must be very minimal and direct. The app will allow virtual users to get a ticket, book visits, as well as monitor their tickets and visits, either if the virtual user has an account or not. If user does not login, the app will just consider him as a guest.

Here we can see some draft mockups* with colours and graphics not optimized:

The app will allow user to define first either the shop or the date and time, in the case of "Book a visit", it is not shown in this demo because it is similar and irrelevant.

**Mockups are taken from an interactive graphic demo with graphic-driving purposes only, linked in the "reference documents" paragraph.*

BOOK A VISIT AS REGISTERED USER

Selected Shop:
shop1

Choose a date

Choose a time

confirm booking

cancel booking

TICKET PROPOSAL

Selected Shop:
shop3

Choose a date

Choose a time

[optional] search and select what you will buy

confirm booking

cancel booking

BOOK A VISIT AS GUEST

TICKET CONFIRMATION

Confirmation successful!

Here is your ticket recap:

Shop: shop2

Hour: 21

Date: November 26, 2020

QR Code

Selected Shop:
shop2

First Available ticket is around 21

confirm ticket

cancel ticket

In the case of “book a visit”, after the shop selection, the app will allow registered users to select

their shopping list:

- II. Physical ticket dispensers, that will be installed in front of each shop, acting as proxies for the system. Physical ticket dispensers will allow physical users to get a ticket for the shop to which the dispenser belongs to.

Admin interface, that will be a more statistics-oriented panel, accessible through a desktop app (requiring an Authorized Account), that will allow the shop manager to login from an authorized device and monitor entrances and statistics as the average duration of a visit.

A.1)

- I. *Virtual Users must have a device that can download and run the app. To use all of the functionalities, as the notifications about the traveling time to a shop when the time is close to user's turn, the device must have GPS turned on.*

Dispensers must have a screen to display the first available time slot for a ticket and to ask for confirmation. There must also be two clearly distinguishable buttons for accepting or declining tickets, as to allow for an easy interaction with the customers.

I.

A.1)

- I. *The system will need to access to some external APIs to access to maps, needed for user localization, user-to-store distance and time estimation and to find stores near a given address.*
- II. *Devices that run the app will have as operating system IOS 9+ or Android 4.0.3+.*
- III. *A relational DBMS is required for managing store and tickets data and to allow lookups.*

Shop manager's PC that runs desktop app will have Windows 10 as operating system.

To be better defined

Pagina 18: Commentato [GR17]	Giorgio Romeo	25/11/2020 08:12:00
------------------------------	---------------	---------------------

It probably can be written better.

Tabella
formattata

Events flow	1) The user selects a time. 2) The system both provides the available stores (selectable through the map) for the current day and notifies to the user the possibility to lookup further available stores for the selected time slot. 3) If the user clicks on the notification, the system provides to the user a list with further available stores. Otherwise, the user can select only an available store from the map.
Exit condition	The user successfully receives the list of further available stores.
